

Ognjen Adzic

Software Engineer and Product Builder

+382 68 618 611 | oginjo28@gmail.com | linkedin.com/in/ognjenadzic | github.com/OgnjenAdzic28 | ognjenadzic.com

PROFESSIONAL SUMMARY

Product-focused software engineer and founder experienced in shipping SaaS products, AI agent workflows, and computer vision systems. Owns delivery from product scoping and UX through architecture, implementation, deployment, and evaluation.

EXPERIENCE

Pingless

2025 - 2026

Co-Founder

- Built and shipped SaaS platforms, AI automation tools, and web applications, owning product scope, design, architecture, engineering, deployment, and iteration.
- Delivered client and internal products from requirements through production launch using TypeScript, React, Next.js, Node.js, APIs, authentication, billing, and Convex.

ArchiStella

2024

Co-Founder

- Designed and built a B2B marketplace for maritime companies to order directly from vessel suppliers, distributors, and brand owners.
- Led product scoping, UI/UX, and application development from concept through a working product experience.

PROJECTS

Maritime Perception MVP

2026

Python, PyTorch, DeepLabV3+, YOLOv8, ByteTrack, ConvLSTM, ONNX, Gradio

- Built a maritime perception stack for water, sky, and obstacle segmentation, vessel detection and tracking, synthetic radar segmentation, and temporal radar modeling.
- Benchmarked CPU inference performance and shipped an interactive Gradio demo for inspection and evaluation.

Autonomous Perception Lab

2026

Python, Rust, YOLO, KITTI, LiDAR, multi-object tracking, BEV visualization

- Built a CPU-friendly autonomous driving perception pipeline with real KITTI verification, sparse LiDAR depth projection, multi-object tracking, metrics, and BEV visualization.
- Implemented replay export tooling and a Rust replay parser for offline inspection and evaluation.

Agent Workflow Benchmark

2026

TypeScript, Node.js, React, Vite, CLI tooling, AI evaluation

- Built a benchmark suite for testing AI agents on email, calendar, task, memory, privacy, prompt injection, approval boundaries, latency, and trace quality.
- Shipped TypeScript and Node.js CLI tooling with a React and Vite dashboard for running evaluations and inspecting results.

TECHNICAL SKILLS

Programming Languages: TypeScript, Python, Rust, JavaScript

Web and Backend: React, Next.js, Node.js, Vite, Convex, REST APIs, authentication, billing

AI and Computer Vision: AI agents, tool use, memory, approval gates, evaluation, PyTorch, segmentation, detection, tracking, LiDAR, radar simulation

Tools and Deployment: Git, GitHub, Gradio, ONNX, production deployment

Spoken Languages: English (native), Croatian (native), Mandarin Chinese (working fluency), German (working fluency)
