EXPERIENCE

Pingless

2025 - 2026

Co-Founder

- Built and shipped SaaS platforms, AI automation tools, and web applications, owning product scope, design, architecture, engineering, deployment, and iteration.
- Delivered client and internal products from requirements through production launch using TypeScript, React, Next.js, Node.js, APIs, authentication, billing, and Convex.

ArchiStella

2024

Co-Founder

- Designed and built a B2B marketplace for maritime companies to order directly from vessel suppliers, distributors, and brand owners.
- Led product scoping, UI/UX, and application development from concept through a working product experience.

PROJECTS

Maritime Perception MVP | *Python, PyTorch, YOLOv8, ByteTrack, ConvLSTM, ONNX*

2026

- Built a maritime perception stack for water, sky, and obstacle segmentation, vessel detection and tracking, synthetic radar segmentation, and temporal radar modeling.
- Benchmarked CPU inference performance and shipped an interactive Gradio demo for inspection and evaluation.

Autonomous Perception Lab | *Python, Rust, YOLO, KITTI, LiDAR, BEV Visualization*

2026

- Built a CPU-friendly autonomous driving perception pipeline with real KITTI verification, sparse LiDAR depth projection, multi-object tracking, metrics, and BEV visualization.
- Implemented replay export tooling and a Rust replay parser for offline inspection and evaluation.

Agent Workflow Benchmark | *TypeScript, Node.js, React, Vite, AI Evaluation*

2026

- Built a benchmark suite for testing AI agents on email, calendar, task, memory, privacy, prompt injection, approval boundaries, latency, and trace quality.
- Shipped TypeScript and Node.js CLI tooling with a React and Vite dashboard for running evaluations and inspecting results.

TECHNICAL SKILLS

Programming Languages: TypeScript, Python, Rust, JavaScript

Web & Backend: React, Next.js, Node.js, Vite, Convex, REST APIs, authentication, billing

AI & Computer Vision: AI agents, tool use, memory, approval gates, evaluation, PyTorch, segmentation, detection, tracking, LiDAR, radar simulation

Tools & Deployment: Git, GitHub, Gradio, ONNX, production deployment

Spoken Languages: English (native), Croatian (native), Mandarin Chinese (working fluency), German (working fluency)
